

2025

# Characterization of Seismic Sources

• • •

1. 시 간 : 3일 21시간 / 10:00~18:00
2. 장 소 : 부경대학교
3. 일 정 : 2025.04.15.(화) ~ 2025.04.17.(목)

• • •

 (주)피앤에스컨설팅

## 교육 소개

교육기간	2025.04.15.(화) ~ 2025.04.17.(목)
교육시간	10:00 ~ 18:00 [3일, 21시간]
교육장소	부경대학교 대연캠퍼스 장보고관 3층 리더십홀
교육비 (부가가치세 포함)	일반: 150만원 학생: 50만원

## 교육 신청

- 교육 시작 2주 전까지 참가신청서를 작성하여 메일로 통지
  - [pns012023@gmail.com](mailto:pns012023@gmail.com)
  - 학생(학부생, 대학원생)의 경우 재학증명서 첨부
- 교육 참가자 이름으로 교육비를 아래 계좌로 입금
  - 우리은행 1005-604-735789 (주식회사 피엔에스컨설팅)

## 수강생 특전

- 모든 수강생에게 SeisParEst 6개월 라이센스 제공
- 같은 기관/단체에서 2인 이상 수강 시 SeisParEst 1년 라이센스 제공

## 준비물

- SeisParEst 실습을 위해 노트북 지참

## 교육 내용

일 차	내 용
1일 차 (7시간)	<ul style="list-style-type: none"> <li>■ Preparation for training           <ul style="list-style-type: none"> <li>• Program download &amp; installation</li> </ul> </li> <li>■ Fundamental statistics           <ul style="list-style-type: none"> <li>• Probability theory               <ul style="list-style-type: none"> <li>- Sample mean &amp; variance</li> <li>- Frequently used distributions</li> <li>- Special topics (order statistics, one function of two random variables, central limit theorem)</li> <li>- Distribution of sample mean &amp; variance</li> </ul> </li> <li>• Probabilistic estimation               <ul style="list-style-type: none"> <li>- Interval estimation</li> <li>- Point estimation (maximum likelihood method, method of moments, least-squares method)</li> </ul> </li> <li>• Statistical test               <ul style="list-style-type: none"> <li>- Statistical hypotheses</li> <li>- Error types</li> <li>- Test Procedure</li> <li>- Test examples (population mean, population variance, distributions)</li> </ul> </li> <li>• Monte Carlo Simulation               <ul style="list-style-type: none"> <li>- Parametric function</li> <li>- Transform method</li> <li>- Rejection method</li> </ul> </li> </ul> </li> </ul>
2일 차 (7시간)	<ul style="list-style-type: none"> <li>■ Preparation of earthquake catalogs           <ul style="list-style-type: none"> <li>• Origin parameters</li> <li>• Integration of earthquake catalogs</li> </ul> </li> <li>■ Completeness analysis of earthquake catalogs           <ul style="list-style-type: none"> <li>• Background</li> <li>• Categories of completeness analysis methods</li> <li>• Catalog-based completeness analyses: six methods</li> </ul> </li> <li>■ Magnitude distribution models           <ul style="list-style-type: none"> <li>• Exponential model</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>• Characteristic earthquake model</li> <li>■ Characterization of seismic sources           <ul style="list-style-type: none"> <li>• Types of seismic sources and their parameters</li> <li>• Estimation of the Richter-b</li> <li>• Estimation of earthquake occurrence rates</li> <li>• Estimation of Mmax: 11 methods</li> <li>• Iterative scheme for the simultaneous estimation</li> </ul> </li> </ul>
3일 차 (7시간)	<ul style="list-style-type: none"> <li>■ Use of geologic &amp; geodetic information           <ul style="list-style-type: none"> <li>• Estimation of Mmax</li> <li>• Estimation of earthquake occurrence rates</li> </ul> </li> <li>■ Topical issues           <ul style="list-style-type: none"> <li>• Effect of catalog integration</li> <li>• Earthquake double-counting</li> </ul> </li> <li>■ Practice with SeisParEst           <ul style="list-style-type: none"> <li>• User manual</li> <li>• Seismic source specific catalog: culling earthquakes</li> <li>• Evaluation of catalog completeness (6 methods)</li> <li>• 11 methods for evaluation of seismic source characteristics</li> <li>• Interpretation &amp; use of evaluation results</li> </ul> </li> </ul>
